SIDE PROJECTS

Website Demo

HTML Bootstrap website Demo that runs on XAMPP with an Apache Server and MySQL Database so users can log into a php session with provided credentials to access a table of users that the user can add, delete, or modify based on the user's email.

Flat Design Form Login

C# program where the user can access a PostgreSQL database of users by either creating a profile to be uploaded to the "people_table" or logging in with credentials already stored in the database with a stored procedure. Once logged in, the user will be able to edit their information or change their password.

XML Data Generator

C# program where the user can create a xml file based on the information provided. It'll checks against redundancies, cleans data provided, and has an option to view the xml file in a browser window as a plain xml file or as a table similar to a SQL table.

PROGRAMMING SKILLS

- Languages: HTML, PHP, CSS, Javascript, C#, Python, SQL, Java, Visual Basic
- Databases: MySQL, MongoDB, PostgreSQL
- Software: Eclipse, Netbeans, SVN, Visual Studios
